

Amit Kulkarni is a Senior Scientist in Health Informatics at Merck & Co Inc. He has worked at Merck for 12 years in various capacities - leading microarray and siRNA design and management, later building centralized resource for genes, proteins, networks, and pathways and now Health Informatics. He is the primary lead for Merck's external crowdsourcing efforts, a program aiming to turn great ideas for data analysis into competitions that produce outstanding solutions to important business problems. He is also involved in identifying and setting up new partnerships for improving information access, integration, and analysis across the Merck pipeline.
